Join us for a two-part webinar to learn more about Sensory Processing Disorders (SPD).

People with SPD have difficulty processing sensory information and responding appropriately to that information. SPD are associated with problems in adaptive behavior.

Children and adults with sensory processing difficulties can experience impaired self-esteem, anxiety, depression, or aggression.

When sensory disorders are looked at as non-compliance and bad behavior resulting in problems with social participation, self-regulation, and impaired sensorimotor skills needed for daily life tasks.

Who should attend? Families with a child or young adult with disabilities or learning challenges, school staff, other community members
