Intro to Augmentative & Alternative Communication & Resources

2

Questions & Housekeeping

Please feel free to ask questions during the presentation.

There will be pauses throughout for questions as well.

If you have child specific questions, please send me your email address in the chat along with your questions or email me directly so I can give your question my full time and attention.

3

Welcome & Presenter Introduction

Caitlin Hurban, M.A., CCC-SLP

Agenda

- About MATP
- What is Assistive Technology (AT)?
- Introduction to AAC
  - Terminology
  - Types of AAC
  - Access Methods
  - Getting Started
  - Ongoing Support
- AAC Resources
  - Organizations
  - Companies
  - Training
  - Picture Books
  - Social Media
  - Funding

5

Michigan Assistive Technology Program (MATP)

M A T P
Michigan Assistive Technology Program

- MATP is a FREE federally funded program that provides AT related supports around the state including:
  - Awareness Information
  - Training
  - Demonstrations
    - Customized virtual or in-person "how to" sessions to explore AT that meets your needs
  - Loan Program
    - MATP has over 1700 AT items for demo and/or loan
    - *Try before you buy!*
- MATP is by people with disabilities for people with disabilities, their allies, and other community members.
- MATP serves the _entire_ lifespan.

6

What is AT?

- Assistive Technology (AT) is any item, piece of equipment, software, or app that is used to help people with disabilities, including older adults, do what they want to do.

- Technology can make things easier for everyone. For people with disabilities, AT opens up possibilities.
Images selected directly from companies.

7

AAC Modalities

AAC is commonly used to refer to AAC communication systems, and folks often think of speech generating devices in particular, but it also includes:

- gestures
- facial expressions
- body language
- body movement
- drawing
- spelling
- writing
- sign

Source: ASHA.org

8

Types of AAC

Unaided: no external items needed, only the body
  Examples: facial expressions, gestures, body movement...

Aided: uses a tool outside of the body
  Examples: printed boards, pencils, single message switches, speech generating devices...
Sources: ASHA.org, AbleNet, Canva

9

What is AAC?

Augmentative: communication that supplements or adds to speech

Alternative: communication that takes the place of speech

Communication: the active process of exchanging ideas between two or more people

Augmentative and Alternative Communication (AAC): all of the ways, methods, or modalities of communication except for speech

Sources: ASHA.org, Canva

10

Types of AAC

Lite tech/no-tech/non-electronic: AAC that uses no electricity. Often made of paper or plastic.
  Examples: writing, drawing, printed symbol icons, printed symbol boards, printed picture/symbol books, 3D printed/tactile symbols

Sources: ASHA.org, Project Core, PODD, Canva

11

Types of AAC

Mid-tech: AAC that typically uses a battery and generates speech, usually a static display and/or limited symbols/language
  Examples: single message switches, sequential switches, static display overlay speech generating devices

Sources: ASHA.org, Ablenet, Learning Resources

12

Types of AAC

High tech: AAC that typically uses a computer based system with a rechargeable battery. The display often dynamic, meaning that there can be several layers/pages to navigate to access all the language available, provides speech generation

Examples: dedicated speech generating devices, tablets with communication apps

Sources: ASHA.org, PRC-Saltillo, Tobii Dynavox

13

Access Methods

Selection: the way a message is produced by the AAC user within the communication system.

Direct selection: the AAC user chooses the word/symbol from an array of words/symbols.

Examples: electronic, non electronic, physical touch with body or another object (e.g., finger tip, knuckle, palm, chin, nose, stylus, generated movement or signal (e.g., eye gaze, mouse, joystick, light)

Indirect selection: aka scanning: each word/symbol from a selected page is presented in order until the AAC user chooses the word/symbol via an indicating motion, vocalization, or switch.

Words/symbols may be presented in a number of ways/orders, depending on the needs of the individual. Words/symbols may be presented auditorily, tactilely, or visually and may be assisted by a communication partner.

Source: ASHA.org, Canva

14

Who uses AAC?

We ALL use some form of AAC at one point or another.
There are many reasons why someone may benefit from adding AAC as a communication modality. Including:

- They are non speaking
- They are part time speaking
- They have motor planning needs that make speech difficult
- They have a disability that impacts language development
- They are recovering from a medical intervention (e.g., intubation, surgery)
- They have an acquired brain injury
- They have a neurodegenerative disease
- They have a fluctuating disability that may change over time
- And more!

-Some people are full time AAC users and some are part time AAC users.
-AAC needs can shift during the course of day and/or over a lifetime.

Source: ASHA.org, Canva

15

Who can use AAC?

Everyone.

There are NO prerequisites or foundational skills required to start learning to use an AAC system.

Why use AAC?

Access.

Social connection.

Autonomy.

Source: ASHA.org

16

Communication Bill of Rights: everyone has the right to express their wants, needs, thoughts, and ideas.

All people with a disability of any extent or severity have a basic right to affect, through communication, the conditions of their existence. Beyond this general right, a number of specific communication rights should be ensured in all daily interactions and interventions involving persons who have severe disabilities.

To participate fully in communication interactions, each person has these fundamental communication rights:

The right to interact socially, maintain social closeness, and build relationships
The right to request desired objects, actions, events, and people
The right to refuse or reject undesired objects, actions, events, or choices
The right to express personal preferences and feelings
The right to make choices from meaningful alternatives
The right to make comments and share opinions
The right to ask for and give information, including information about changes in routine and environment
The right to be informed about people and events in one's life
The right to access interventions and supports that improve communication
The right to have communication acts acknowledged and responded to even when the desired outcome cannot be realized
The right to have access to functioning AAC (augmentative and alternative communication) and other AT (assistive technology) services and devices at all times
The right to access environmental contexts, interactions, and opportunities that promote participation as full communication partners with other people, including peers
The right to be treated with dignity and addressed with respect and courtesy
The right to be addressed directly and not be spoken for or talked about in the third person while present
The right to have clear, meaningful, and culturally and linguistically appropriate communications

Source: National Joint Committee for the Communication Needs of Persons with Severe Disabilities (NJC)

17

How to get started with AAC?

A speech language therapist leads an evaluation that will likely assess/include a review of the individual's:
- Case history (e.g., education, medical status/history, occupation,)
- Access needs: vision, hearing, motor, sensory
- Current communication skills and needs, communicative competences, language processing
- Language and communication preferences, symbol needs and preferences
- Long term communication goals

An AAC evaluation can be completed a number of ways. The following are helpful tools/approaches to consider: SETT Framework, Participation Model, Access Learning Process (ALP) for AAC, Pragmatic Profile, Communication Matrix, ethnographic interviewing, interviewing support team, Feature Matching

An AAC evaluation must include a trial of AAC systems. The length of the trial may depending on the setting and any funding requirements (e.g., insurance).

AAC evaluations can occur: in private therapy, in the school setting, in a medical setting.

AAC evaluations are often interdisciplinary and may also include: family members, occupational therapists, physical therapists, teachers, psychologists, social workers, paraprofessionals, and other medical or educational professionals.

There are many AAC systems available. How do you choose? It comes down to feature matching.

Source: ASHA.org, Canva

18

Considerations of AAC Selection

High tech AAC is most likely to be provide a robust communication system that:
- has a large quantity and variety of well organized words that include: core and fringe vocabulary
- offers grammar supports
  - O goal: reflective of the individual's dialect and language **work to do here
- is customizable to the voice output that best reflects the individual's:
  - O age, gender identity, race, ethnicity, dialect, language, and cultural identity
- has customizable symbols to reflect the individual's race and personally relevant vocabulary
- allows for future growth
- supports the individual in communicating for a variety of reasons to express their wants, needs, thoughts, and ideas
  - O Including, but not limited to: requesting, questioning, expressing self advocacy, protesting, asking for help, describing an emergency, sharing health status, telling jokes/sharing humor, etc.
- can be available at all times.

Source: ASHA.org

19

Always have backup!

Back up AAC is best planned out ahead of time and may change depending on location and needs over time.

It is always helpful to have lite and mid tech back up AAC systems
- Screens can need repair
- Batteries need charging
- Systems need updating
- beaches/pools can be wet, sandy, and hot
- Sporting events may need lighter weight options
- Certain environments can have sanitary concerns (e.g., bathroom, food prep areas)

Source: ASHA.org, Canva

20

How to support someone learning to use AAC?

- Create a language rich environment by providing modeling
  - O (aka: aided language input/natural aided language, aided language stimulation)
  - O NOT the same as modeling for imitation, but rather, modeling for the sake of example
- Communication is an invitation, not a demand.
- Acknowledge all communication by the person and make meaning, regardless of modality or perceived "mishit."
- Remember that all communication has value. No modality is superior to another. The goal is communication.
- Allow for processing time.
- Be aware of and honor the person's alerting method.
- Treat the AAC system like a voice. Don't take it away. And always have a backup.
