Assistive technology (AT) can open doors to greater independence, learning, communication, and access for children receiving special education services. But what exactly is AT, and how do families know what's available, appropriate, or necessary?

Join us for a family-friendly session designed to demystify assistive technology. We'll explore what AT is, share examples across a range of tools, from no-tech strategies to high-tech devices, and discuss how AT supports learning and participation across all ages and stages.

This webinar will discuss AT in the Individualized Education Program:

- Help you understand what assistive technology is and how it can be used in everyday life
- Provide examples of tools and strategies for children of different ages, from no-tech to high-tech
- Share free and low-cost AT resources available to Michigan families through schools, lending libraries, and statewide programs

There will also be time set aside to ask questions.

Who should attend?

Families with a child or young adult with an IEP or IFSP who uses—or may benefit from AAC.
